

The Starlight Difference

By applying the result of years of ongoing research and development, Starlight Manufacturing has created a **diversified selection** of preformed gold shell crowns for natural anterior tooth coverage. These crowns are produced using specially formulated **22kt yellow gold**, **white gold**, (resembling platinum) or **coin gold**, (resembling a new copper penny).

This accomplishment expands our existing line of open face and full shell denture crowns and specialty items to enhance your patients needs.

Starlight's new line of preformed natural teeth provide many advantages:

- New ridge lap design to maximize chair side time
- Available in both right and left sides
- All teeth are 13mm long
- Your choice of yellow, white or coin gold
- Clear plastic vials identification for operatory storage
- Smaller sizes may be used for upper or lower teeth
